This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

#### ACCEPTED MANUSCRIPT

#### Highlights

- A full scheme aiming to achieve all necessary demands for shared-data public auditing
- A novel lazy-revocation strategy for efficient and secure user revocation
- Enable identity traceability of malicious users using a modification record table
- Enable dynamic operations of shared data using an extended dynamic hash table
- The scheme outperforms the state-of-the-art ones in computational costs
