This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Tensor based discriminative tracking framework is presented in this paper
- A multi-linear classifier with structured output is proposed for tensor input
- Parameter tensor reconstruction in online updating provides robustness against noise
- Tensor block coordinate descent optimization is introduced in online learning
- The proposed tracker shows superior performance on benchmark videos
