This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Exploratory modelling results are sensitive to the way that experiments are designed,
- Feedback from output space can inform the design of experiments,
- An informed design of experiments results in higher confidence in final results,
- We present an agent-monitored framework for informing design of experiments.
