This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- In a FEN-hedonic game, players partition the other players into friends, enemies, and neutral players and rank friends and enemies.
- We propose Borda-induced cardinal comparability functions to extend partial to complete preference orders.
- For common solution concepts, we study the computational complexity of the existence and the verification problem.
