This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Retinal pigment epithelial cells as a therapeutic tool and target against retinopathies

Barbara Pavan^{1,*} pvnbbbr@unife.it , Alessandro Dalpiaz²

¹Department of Biomedical and Specialist Surgical Sciences, University of Ferrara, Ferrara, Italy

²Department of Chemistry and Pharmaceutical Sciences, University of Ferrara, Ferrara, Italy

*Corresponding author:

Highlights:

- RPE epithelial barrier features play a key part in rethinopathies
- Adult human RPE cultured cells can express neuronal markers
- HRPE cells customized for tracking processes related to retinal diseases
- SVCT2, GLUTs, MRPs, OR51E2 are targets in cell-based therapies and drug delivery
- RAR β is a topic for renewal of retinal dopaminergic precursors in RPE cells

Keywords: RPE; retinopathy; transdifferentiation; OR51E2; SVCT2; GLUT; MRPs; epithelial barrier.

Teaser: Engineering of retinal pigment epithelium cells for discovering new therapeutic tools against retinal diseases.
