Title: Females of the annual killifish *Austrolebias reicherti* (cyprinodontiformes: rivulidae) recognize conspecific mates based upon chemical cues

Authors: Federico Reyes Blengini, Bettina Tassino, Carlos Passos

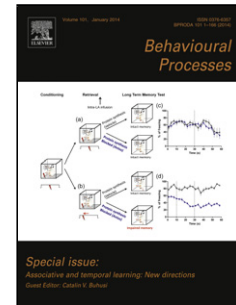

PII: S0376-6357(17)30162-6
DOI: <http://dx.doi.org/10.1016/j.beproc.2017.08.007>
Reference: BEPROC 3495

To appear in: *Behavioural Processes*

Received date: 28-3-2017
Revised date: 5-7-2017
Accepted date: 13-8-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

FEMALES OF THE ANNUAL KILLIFISH *Austrolebias reicherti* (CYPRINODONTIFORMES: RIVULIDAE)
RECOGNIZE CONSPECIFIC MATES BASED UPON CHEMICAL CUES

Highlights

- Females *A. reicherti* discriminate for conspecifics based on olfactory cues
- Discrimination was lost when olfactory cues were not available
- *Austrolebias* are a promising model to investigate on chemical communication
