This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Schilder's disease is a rare central nervous system demyelinating disorder that affects youth.
- This disorder is normally monophasic and responds to corticosteroids.
- This is an unusual case of Schilder's disease because it depicts a recurrent disease course.
