This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A new approach to end-user satisfaction in Health Information Systems (HIS)
- Face-to-face application in medical faculty hospitals on 543 personnel (physician, nurse, administrative officers).
- Information Quality, System Quality, Support Resource, and Technology Compatibility are considered as effective variable on Total Satisfaction.
- Adaptation of change and development in technology to information systems would affect total satisfaction related with Health Information Systems positively.
