### Abstract

The structure and functioning of coastal ecosystems are shifting worldwide as a result of natural changes and, even more important, consequences of intense human intervention, of which habitat destruction, overexploitation of resources and environmental pollution are among the most serious. In this context, the 56th Conference of the Estuarine Coastal Sciences Association was held in Bremen, Germany, in September 2016 under the umbrella topic 'Coastal Systems in Transition: From a natural to an anthropogenically-modified state'. The objective of this Special Issue is to demonstrate and synthesize the effects of both,
