This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The first city-level building energy efficiency benchmarking system for China.
- A model considering the influence of operation parameters on energy consumption.
- A systematic methodology of building energy benchmarking is proposed.
- The model is a valuable analysis support tool for building energy managers.
