This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Links between sensory processing, adaptive behaviours, and attention skills in children with autism spectrum disorder are investigate.
- High prevalence of atypical sensory processing in children with autism spectrum disorder are found.
- A significant impact of sensory abnormalities on adaptive behaviour is found.
- Interrelations between sensory processing and attention skills are found.
- The current literature is too limited to definitively conclude the direction of these interactions.
