This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- There is an increasing interest in pharmacological treatment of social cognition deficits.
- The publications have a high degree of scientific evidence.
- The journals publishing these articles have a high impact factor.
- Schizophrenia and autism spectrum disorder are the most studied disorders, and the main substances used are oxytocin, psychostimulants, and antipsychotics.
- The studies have focused on emotional processing and theory of mind.
