This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Risk-taking is elevated among suicide decedents.
- Risk-taking is associated with non-fatal suicide attempts in decedents.
- Suicide decedents who did not prepare for suicide showed higher levels of risk-taking.
- Stressors are associated with death by suicide.
