This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 𝔄 trust-aware probability marking traceback scheme is proposed for security of WSNs.
- The marking probability of node adjust according the trust of node.
- The total number of marking tuples is 67.16% of previous studies in our scheme.
- The lifetime can be enhanced by 12.99%-36.61%.
