This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- We describe 37 cases of Convulsive Status Epilepticus at the onset of Panayiotopoulos Syndrome.
- We compare them with a group of children who have experienced classic autonomic signs of PS.
- Convulsive Status Epilepticus is not an event so rare of Panayiotopoulos Syndrome.
- The type of onset does not correlate with the prognosis.
