This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We present a review of tactile sensing applications in dexterous robot hand manipulation.
- This problem is key to dexterous manipulation, and no update reviews are available.
- The main types of tactile sensors and their integration with robot hands are discussed.
- An overview of tactile data processing techniques and its applications is presented.
