Title: An Evolutionary Algorithm Approach to Link Prediction in Dynamic Social Networks

Author: Catherine A. Bliss Morgan R. Frank Christopher M. Danforth Peter Sheridan Dodds

PII: S1877-7503(14)00004-0
DOI: <http://dx.doi.org/doi:10.1016/j.jocs.2014.01.003>
Reference: JOCS 255

To appear in:

Received date: 26-4-2013
Revised date: 4-1-2014
Accepted date: 12-1-2014

Please cite this article as: Catherine A. Bliss, Morgan R. Frank, Christopher M. Danforth, Peter Sheridan Dodds, An Evolutionary Algorithm Approach to Link Prediction in Dynamic Social Networks, *Journal of Computational Science* (2014), <http://dx.doi.org/10.1016/j.jocs.2014.01.003>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Catherine Bliss is a doctoral candidate in Mathematical Sciences at the University of Vermont, where she received the Graduate Research Fellowship from the UVM Complex Systems Center, the Sang Kil Nam Scholarship Award for and John F. Kenney Award for Mathematics. She received her M.S. in Mathematics from the University of Vermont and her M.A. in Marine Affairs and Policy from the Rosenstiel School of Marine and Atmospheric Science at the University of Miami. She holds a B.A. in Psychology and Mathematics. Catherine is interested in computational tools to analyze complex networks, link prediction and social contagion.

Morgan Frank is a Master's student in Mathematics and Statistics at the University of Vermont. He is the recipient of a University Student Scholars Award for his research on human mobility patterns. He received his B.S. in Mathematics and Computer Science from the University of Vermont. Morgan is interested in computational models, graph theory, nonlinear differential equations and data mining.

Chris Danforth is an Associate Professor at the University of Vermont (UVM) in Mathematics and Statistics. He received a B.S. in math and physics from Bates College in 2001, and a Ph.D. in Applied Mathematics and Scientific Computation from the University of Maryland in 2006. He is currently on the faculty of the University of Vermont where he combines mathematical modeling and big data to study a variety of complex biological, natural, and physical systems. Among other projects, he has applied principles of chaos theory to improve weather forecasts, and developed a real-time remote sensor of global happiness using Twitter. His research has been covered by the New York Times, Science Magazine, and the BBC among others. Descriptions of his projects are available at his website: <http://uvm.edu/~cdanfort>.

Peter Sheridan Dodds is a Professor at the University of Vermont (UVM) working on system-level problems in many fields, ranging from sociology to physics. He maintains general research and teaching interests in complex systems and networks with a current focus on sociotechnical and psychological phenomena including contagion, problem-solving, and collective emotional states. His methods encompass large-scale sociotechnical experiments, large-scale data collection and analysis, and the formulation, analysis, and simulation of theoretical models. Dodds's training is in theoretical physics, mathematics, and electrical engineering with formal postdoctoral experience in the social sciences. He is Director of the UVM's Complex Systems Center, co-Director of UVM's Computational Story Lab, and a visiting faculty fellow at the Vermont Advanced Computing Center.
