Interpreting support vector machine models for multivariate group wise analysis in neuroimaging

Bilwaj Gaonkar, Russell T Shinohara, Christos Davatzikos, for the
Alzheimers Disease Neuroimaging Initiative

PII: S1361-8415(15)00095-X
DOI: [10.1016/j.media.2015.06.008](https://doi.org/10.1016/j.media.2015.06.008)
Reference: MEDIMA 1019

To appear in: *Medical Image Analysis*

Received date: 29 July 2014
Revised date: 4 June 2015
Accepted date: 17 June 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Support vector machines (SVM) use multivariate imaging information for diagnosis.
- Approximate SVM permutation tests for population statistics
- Improved statistics used for SVM permutation testing
- Fast multivariate inference
- Difference between multivariate and univariate inference
