This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

1. A new topology optimization algorithm for stress minimization is developed;
2. Stress minimization is accomplished based on the distortion strain energy density;
3. Optimized structures are represented by smooth boundaries;
4. Both 2D and 3D examples are presented.
