This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

1. We propose a 2-tuples linguistic opinion dynamics model in the bounded confidence.
2. We reveal some sufficient conditions to form a consensus or splits.
3. We show the effects of the bounded confidence on the linguistic opinion formation.
4. We show the effects of the uniformities of linguistic terms on the opinion formation.
5. We highlight the importance of the agree confidence on the consensus reaching.
