

## Accepted Manuscript

A novel imputation methodology for time series based on pattern sequence forecasting

Neeraj Bokde, Marcus W. Beck, Francisco Martínez Álvarez, Kishore Kulat

PII: S0167-8655(18)30650-0  
DOI: <https://doi.org/10.1016/j.patrec.2018.09.020>  
Reference: PATREC 7319

To appear in: *Pattern Recognition Letters*

Received date: 11 August 2017  
Revised date: 25 June 2018  
Accepted date: 19 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An imputation method to impute missing values in univariate time series is described
- The imputePSF method imputes missing values using repeating patterns of observed data
- The performance of imputePSF is tested on three datasets with distinct patterns
