

Author's Accepted Manuscript

High seeding density of human chondrocytes in agarose produces tissue-engineered cartilage approaching native mechanical and biochemical properties

Alexander D. Cigan, Brendan L. Roach, Robert J. Nims, Andrea R. Tan, Michael B. Albro, Aaron M. Stoker, James L. Cook, Gordana Vunjak-Novakovic, Clark T. Hung, Gerard A. Ateshian

PII: S0021-9290(16)30556-5
DOI: <http://dx.doi.org/10.1016/j.jbiomech.2016.04.039>
Reference: BM7722

To appear in: *Journal of Biomechanics*

Received date: 8 January 2016
Revised date: 28 April 2016
Accepted date: 30 April 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

High seeding density of human chondrocytes in agarose produces tissue-engineered cartilage approaching native mechanical and biochemical properties
