

# Author's Accepted Manuscript

Fatigue microcracks that initiate fracture are located near elevated intracortical porosity but not elevated mineralization

Travis L. Turnbull, Andrew P. Baumann, Ryan K. Roeder

PII: S0021-9290(14)00361-3  
DOI: <http://dx.doi.org/10.1016/j.jbiomech.2014.06.022>  
Reference: BM6704

To appear in: *Journal of Biomechanics*

Received date: 11 November 2013  
Revised date: 7 May 2014  
Accepted date: 18 June 2014

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Fatigue microcracks that initiate fracture are located near elevated  
intracortical porosity but not elevated mineralization
