Direct reciprocity under uncertainty does not explain one-shot cooperation,
but demonstrates the benefits of a norm psychology

Matthew R. Zefferman

PII: S1090-5138(14)00051-8
DOI: doi: [10.1016/j.evolhumbehav.2014.04.003](https://doi.org/10.1016/j.evolhumbehav.2014.04.003)
Reference: ENS 5903

To appear in: *Evolution and Human Behavior*

Received date: 23 October 2013
Revised date: 5 April 2014
Accepted date: 17 April 2014

Acknowledgments

I thank Peter Richerson, Richard McElreath, Kyle Joyce, Emily Zefferman, Katie Demps, Kari Schroeder, Bruce Winterhalder, members of the UC Davis Cultural Evolution and Human Behavioral Ecology Labs and three anonymous reviewers for comments on earlier drafts of this paper and Andrew Delton and Max Krasnow for help in recreating their original model. This work was funded, in part, by a block grant from the University of California, Davis, Graduate Group in Ecology and partly preformed at NIMBioS, sponsored by the NSF, U.S. Department of Homeland Security, and U.S. Department of Agriculture through NSF Awards EF-0832858 and DBI-1300426, with additional support from the University of Tennessee.
