

AIMS AND SCOPE

Alcohol is an international, peer-reviewed journal that is devoted to publishing multi-disciplinary biomedical research on all aspects of the actions or effects of alcohol on the nervous system or on other organ systems. Emphasis is given to studies into the causes and consequences of alcohol abuse and alcoholism, and biomedical aspects of diagnosis, etiology, treatment or prevention of alcohol-related health effects. Intended for both research scientists and practicing clinicians, the journal publishes original research on the neurobiological, neurobehavioral, and pathophysiological processes associated with alcohol drinking, alcohol abuse, alcohol-seeking behavior, tolerance, dependence, withdrawal, protracted abstinence, and relapse. In addition, the journal reports studies on the effects alcohol on brain mechanisms of neuroplasticity over the life span, biological factors associated with adolescent alcohol abuse, pharmacotherapeutic strategies in the treatment of alcoholism, biological and biochemical markers of alcohol abuse and alcoholism, the pathological effects of uncontrolled drinking, biomedical and molecular factors in the effects on liver, immune system, and other organ systems, and biomedical aspects of fetal alcohol spectrum disorder including mechanisms of damage, diagnosis and early detection, treatment, and prevention. Articles are published from all levels of biomedical inquiry, including the following: molecular and cellular studies of alcohol's actions in vitro and in vivo; animal model studies of genetic, pharmacological, behavioral, developmental or pathophysiological aspects of alcohol; human studies of genetic, behavioral, cognitive, neuroimaging, or pathological aspects of alcohol drinking; clinical studies of diagnosis (including dual diagnosis), treatment, prevention, and epidemiology. The journal will publish 8 issues per year; the accepted abbreviation for Alcohol for bibliographic citation is *Alcohol*.

Alcohol subscribes to the tenets of The Farmington Consensus (see http://www.elsevier.com/framework_products/promis_misc/525453fc.pdf or <http://www1.elsevier.com/homepage/sab/alcohol/>

([fconsensus.htm](http://www.elsevier.com/framework_products/promis_misc/525453fc.pdf)). Submission of a paper to the journal will be taken as evidence that the authors have complied with the tenets set forth in the Consensus. All submitted material will be subject to peer review. *Alcohol* considers three types of manuscripts for publication:

—**Original research articles** are full-length reports of the authors' original research addressing topics consistent with the Aims and Scope of the journal. Submissions outside the scope of the journal, or incomplete or fragmentary submissions, will not be considered.

—**Rapid communications** are original, high-quality manuscripts that describe new data of high impact and major importance of the field. These contributions are typically short (e.g., 4 journal pages), and will be peer-reviewed by at least one expert in the field of the research and an Editor, and will be either accepted with minimal or no revisions or rejected. Publication of accepted rapid communications will be expedited.

—**Invited review articles** will be considered for publication, upon invitation from the Editor-in-Chief, as full-length paper or mini-reviews. These contributions will be peer-reviewed. Contact the Editor-in-Chief concerning the suitability of a topic for an invited review.

There are no page charges for articles published in *Alcohol*, and the current practice is to provide the corresponding author with 50 free reprints of his/her article. Effective May 2006, authors from all countries are invited to submit manuscripts, complete in all respects and following the Instructions to Authors (revised November 2013), to David M. Lovinger, Editor-in-Chief, via Elsevier electronic submission at <http://ess.elsevier.com/alcohol/>

INSTRUCTIONS TO AUTHORS (Revised November 2013)

MANUSCRIPT SUBMISSION

Authors are encouraged to review the Aims and Scope to determine whether their contribution is suitable for publication in *Alcohol*. All submitted material will be subject to peer review. The requirements set forth in the Instructions to Authors apply to all types of manuscripts accepted for publication in *Alcohol*, as follows:

- **Original research articles** are full-length reports of the authors' original research addressing topics consistent with the Aims and Scope of the journal. Submissions outside the scope of the journal, or incomplete or fragmentary submissions, will not be considered.

- **Rapid communications** are original, high-quality manuscripts that describe new data of high impact and major importance to the field. These contributions are typically short (e.g., 4 journal pages), and will be peer-reviewed by at least one expert in the

field of the research and an Editor, and will be either accepted with minimal or no revisions or rejected. Publication of accepted rapid communications will be expedited.

- **Invited review articles** will be considered for publication, upon invitation from the Editor-in-Chief or Associate Editor, as full-length reviews or mini-reviews. These contributions will be peer-reviewed. Authors should contact the Editor-in-Chief concerning the suitability of a topic for an invited review.

- **Invited editorials or commentaries** will be considered for publication, upon agreement by the Editor-in-Chief and Associate Editor. These contributions should be relatively short (2-3 journal pages), and focused on topics of high current interest, controversy, or fast-paced change. They will be peer reviewed by at least one member of the Editorial staff and another recognized expert in the area. Authors should contact the Editor-in-Chief concerning the suitability of a topic for an invited editorial or commentary.

Authors from all countries are invited to submit manuscripts (complete in all respects) to the Editor-in-Chief using Elsevier's web-based electronic submission system, EVISE at the following URL: https://www.evise.com/evise/faces/pages/navigation/NavController.jspx?JRNL_ACR=ALCOHOL (instructions are provided below).

Alcohol subscribes to the tenets of [The Farmington Consensus \(pdf\)](#). Submission of a paper to the journal will be taken as evidence that the authors have complied with the tenets set forth in the Consensus, including the "Expectations of Authors." Consistent with those tenets, requirements for authorship are: (1) substantial contribution to conception, design, acquisition, analysis, and/or interpretation of data; (2) contribution to the writing and intellectual content of the article; and (3) final approval of the submitted manuscript.

ELECTRONIC SUBMISSION

All manuscripts are to be submitted and reviewed electronically using the journal's EVISE website (https://www.evise.com/evise/faces/pages/navigation/NavController.jspx?JRNL_ACR=ALCOHOL). Prepare your manuscript in PDF format. Acceptable figure formats are TIFF, EPS, PDF or MS Office files (Word, Powerpoint, Excel), but TIFF or EPS formats are preferred.

Authors should prepare the following items, using standard word processing and graphics/imaging tools, in preparation for electronic submission of their manuscript:

1. Electronic copy of the Cover Letter (as a document file), signed by corresponding author, briefly describing the work and explicitly stating and signing for the following assurances:

- (a) that all co-authors have read, approve of, and concur with the submitted manuscript;
- (b) that all authors have made substantial contributions that meet the stated requirements for authorship;
- (c) that due care has been exercised by the authors to ensure the integrity of the work;
- (d) that none of the original material contained in the manuscript has been previously published (except in abstract form as part of scientific meetings) nor is currently under review for publication elsewhere;
- (e) that any commercial affiliation or consultant role of an author that could be construed as a conflict of interest has been acknowledged (or a statement indicating that no such conflict of interest exists);
- (f) any necessary accompanying documentation (e.g., signed permission letter to include previously published material in the contribution) is included;
- (g) a list of up to 3 suggested reviewers (with complete mailing address and e-mail address) who could potentially review the contribution. (Note, however, that the final choice of reviewers will be the prerogative and responsibility of the Editors.)

2. Electronic copy of the Manuscript (as a PDF file), that includes Title & Author page, Abstract, Key Word list, Manuscript text, tables, figures, figure legends and references.

3. For reviewing purposes, electronic copies of each figure (as a separate file), may also be uploaded, preferably in either TIFF (Tagged Image File Format) or EPS (Encapsulated Post Script) format; acceptable alternative figure formats are PDF or MS Office files (Word, Powerpoint, Excel).

MANUSCRIPT FORMAT AND STYLE

Manuscripts that do not adhere to the following instructions will be returned to the corresponding author for technical revision before undergoing peer review. For manuscripts under revision, contributions not revised and returned to the editorial office within 3 months after being returned to the authors for revision may be considered as withdrawn, unless the communicating author requests an extension.

Title Page: Include (a) complete title of manuscript; (b) authors' full names, (c) name of affiliation, laboratory or institution of each author including city, state or province, ZIP or postal code, and country (footnoted and listed on separate lines if more than one laboratory or institution); (c) name and complete address for correspondence, including the corresponding author's telephone and fax numbers and e-mail address.

Abstract and Keywords: Include an abstract that briefly summarizes the work, limited to a short paragraph of about 300 words. Succinctly state the purpose of the study, basic methods and procedures, the most important findings, and principal conclusions. Prepare as one continuous paragraph without sections or sub-headings. At the bottom of the abstract, provide a list of up to 6 keywords or short phrases, in italics, suitable for indexing terms.

Text Organization: Include the following main sections in with section headings (Introduction, Materials and Methods, Results, and Discussion) on separate lines and in bold font. (Note: As of April 2007, the format will no longer use numbering of main sections or sub-sections in the manuscript).

Introduction

In this section, the objectives of the research should be clearly stated. Relevant background information and published studies should be described concisely, and be cited appropriately.

Materials and Methods

This section should contain all the details necessary to reproduce the experiments. Avoid re-describing complete details of methods already published. [Include subsections, labeled in italics, if applicable and as needed (e.g., *Subjects, Apparatus, Drug Treatments, Procedures, Statistical Analyses*).] **If experimental animals were used**, include a statement indicating whether the research was reviewed in advance by the institutional Animal Care and Use Committee and whether the research was conducted according to the requirements of all applicable local, national, and international standards for the care and use of laboratory animals (indicating the specific guidelines followed, e.g., the NIH Guide for the Care and Use of Laboratory Animals). **If human subjects were involved**, include a statement indicating **both** (a) that written informed consent was obtained from each human subject and (b) that the procedures followed were in accordance with the ethical standards of the responsible committee on human experimentation (institutional or regional) and with the Helsinki Declaration of 1975, as revised in 1983.

Results

The results should be described clearly and concisely, and in logical order without extended discussion of their significance. Results should usually be presented descriptively, supported with appropriate statistical analyses, and be supplemented by photographs or diagrams.
