Buckling analysis of a defective annular graphene sheet in elastic medium

M. Fadaee

PII: S0307-904X(15)00563-6
DOI: [10.1016/j.apm.2015.09.029](https://doi.org/10.1016/j.apm.2015.09.029)
Reference: APM 10728

To appear in: *Applied Mathematical Modelling*

Received date: 12 February 2015
Revised date: 20 July 2015
Accepted date: 23 September 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- > Static stability of a defective annular graphene sheet is considered.
- > Translational addition theorem is employed to analyze the problem.
- > The graphene sheet is elastically restrained at the bottom surface.
- > The eccentricity and size of defect have significant effects on the buckling loads.
