Exercise-Induced Neuroplasticity in Human Parkinson's disease: What is the Evidence Telling Us?

Mark A. Hirsch, Ph.D., Sanjay Iyer, M.D., Mohammed Sanjak, Ph.D., P.T., M.B.A

PII: S1353-8020(15)00419-8

DOI: [10.1016/j.parkreldis.2015.09.030](https://doi.org/10.1016/j.parkreldis.2015.09.030)

Reference: PRD 2789

To appear in: *Parkinsonism and Related Disorders*

Received Date: 30 August 2015

Revised Date: 10 September 2015

Accepted Date: 14 September 2015

Please cite this article as: Hirsch MA, Iyer S, Sanjak M, Exercise-Induced Neuroplasticity in Human Parkinson's disease: What is the Evidence Telling Us?, *Parkinsonism and Related Disorders* (2015), doi: 10.1016/j.parkreldis.2015.09.030.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
