Cavitation during the protein misfolding cyclic amplification (PMCA) method – the trigger for *de novo* prion generation?

Cathryn L. Haigh, Simon C. Drew

PII: S0006-291X(15)00726-3

DOI: [10.1016/j.bbrc.2015.04.048](https://doi.org/10.1016/j.bbrc.2015.04.048)

Reference: YBBRC 33794

To appear in: *Biochemical and Biophysical Research Communications*

Received Date: 31 March 2015

Please cite this article as: C.L. Haigh, S.C. Drew, Cavitation during the protein misfolding cyclic amplification (PMCA) method – the trigger for *de novo* prion generation?, *Biochemical and Biophysical Research Communications* (2015), doi: 10.1016/j.bbrc.2015.04.048.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Cavitation during the protein misfolding cyclic amplification (PMCA) method – the trigger for *de novo* prion generation?
