

Subject index

Volume 82 (2005)

Adleman–Lipton model; Maximum cut problem; NP-complete problem; DNA computing **82**, 203

Anharmonic potential; Gompertz function; Fractals; Complexity; Growth; Self-organization **82**, 61

Animal behavior; Self-organization; Flexibility **82**, 107

Aquaporin; Red blood cell; Water transport; Membrane flickering; Cytoskeleton **82**, 189

Binding change mechanism; Bioenergetics; Genetic code; Origin of life; RNA World; Thermosynthesis **82**, 93

Biodiversity; Thomas Gold; Deep hot biosphere; Macroevolution; Neo-Darwinism; Geological catastrophism; Global mass extinctions; Genetically transposable elements; Bioplutons; Bioplutonism **82**, 83

Bioenergetics; Binding change mechanism; Genetic code; Origin of life; RNA World; Thermosynthesis **82**, 93

Bioplutonism; Thomas Gold; Deep hot biosphere; Macroevolution; Biodiversity; Neo-Darwinism; Geological catastrophism; Global mass extinctions; Genetically transposable elements; Bioplutons **82**, 83

Bioplutons; Thomas Gold; Deep hot biosphere; Macroevolution; Biodiversity; Neo-Darwinism; Geological catastrophism; Global mass extinctions; Genetically transposable elements; Bioplutonism **82**, 83

Boolean circuit; DNA computing; Molecular programming **82**, 52

Classification; Evolutionary neural network; Stochastic adaptation; Optimization; Perturbation function; Evolvability **82**, 168

Classification of cancer data; Gene subset selection; Probabilistic model building genetic algorithm; Support vector machine; Informative genes; Gene expression; Weighted fitness; *k*-Nearest neighbor classifier; Signal-to-noise ratio **82**, 208

Cluster analysis; Electromyography; Motor unit action potentials; Generative topographic mapping; Self-organizing map **82**, 273

Coherent energy storage; Thermodynamics; Organised complexity; Cycles; Indicators of sustainability; Minimum dissipation **82**, 39

Competitive-coexistence; Food-value; Nutrient bound; Limit cycle; Extinction **82**, 143

Completeness; Expressiveness; Optimality; Search costs and total optimality; Evolutionary Turing Machine; Universal Evolutionary Turing Machine; Multiobjective optimization; Convergence and asymptotic convergence; Undecidable and intractable problems; SuperTuring models of computation **82**, 1

Complex adaptive systems; Kinetic folding of RNA; RNA secondary structure; RNA sequence-structure map; Fitness landscapes **82**, 257

Complexity; Gompertz function; Anharmonic potential; Fractals; Growth; Self-organization **82**, 61

Convergence and asymptotic convergence; Expressiveness; Completeness; Optimality; Search costs and total optimality; Evolutionary Turing Machine; Universal Evolutionary Turing Machine; Multiobjective optimization; Undecidable and intractable problems; SuperTuring models of computation **82**, 1

Coregulation; Gene expression; Promoter modules; Genetic algorithm **82**, 235

Cycles; Thermodynamics; Organised complexity; Coherent energy storage; Indicators of sustainability; Minimum dissipation **82**, 39

Cytoskeleton; Aquaporin; Red blood cell; Water transport; Membrane flickering **82**, 189

Deep hot biosphere; Thomas Gold; Macroevolution; Biodiversity; Neo-Darwinism; Geological catastrophism; Global mass extinctions; Genetically transposable elements; Bioplutons; Bioplutonism **82**, 83

Discrete event simulation; Intestinal drug transport; Epithelial cells; Systems biology **82**, 154

Distribution; Rice; Tri-nucleotide repeats; Function **82**, 248

DNA computing; Maximum cut problem; NP-complete problem; Adleman–Lipton model **82**, 203

DNA computing; Molecular programming; Boolean circuit **82**, 52

DNA computing on surfaces; Satisfiability; 3-SAT **82**, 20

Double-well potential; Microtubule; Pseudo-spin; External electric field **82**, 127

Electromyography; Cluster analysis; Motor unit action potentials; Generative topographic mapping; Self-organizing map **82**, 273

Epistasis; Petri net; High order gene–gene interaction; Multi-start random hill climbing **82**, 74

Epithelial cells; Intestinal drug transport; Systems biology; Discrete event simulation **82**, 154

Evolutionary neural network; Stochastic adaptation; Optimization; Classification; Perturbation function; Evolvability **82**, 168

Evolutionary Turing Machine; Expressiveness; Completeness; Optimality; Search costs and total optimality; Universal Evolutionary Turing Machine; Multiobjective optimization; Convergence and asymptotic convergence; Undecidable and intractable problems; SuperTuring models of computation **82**, 1

Evolvability; Evolutionary neural network; Stochastic adaptation; Optimization; Classification; Perturbation function **82**, 168

Expression divergence; Serpin; Gene duplication; Microarray; Sequence divergence **82**, 226

Expressiveness; Completeness; Optimality; Search costs and total optimality; Evolutionary Turing Machine; Universal Evolutionary Turing Machine; Multiobjective optimization; Convergence and asymptotic convergence; Undecidable and intractable problems; SuperTuring models of computation **82**, 1

External electric field; Microtubule; Double-well potential; Pseudo-spin **82**, 127

Extinction; Food-value; Nutrient bound; Competitive-coexistence; Limit cycle **82**, 143

Fitness landscapes; Kinetic folding of RNA; RNA secondary structure; RNA sequence-structure map; Complex adaptive systems **82**, 257

Flexibility; Self-organization; Animal behavior **82**, 107

Food-value; Nutrient bound; Competitive-coexistence; Limit cycle; Extinction **82**, 143

Fractals; Gompertz function; Anharmonic potential; Complexity; Growth; Self-organization **82**, 61

Function; Rice; Tri-nucleotide repeats; Distribution **82**, 248

Gabor wavelets; Vision; Object-recognition; Quantum; Griniasty et al.; Temporal sequences; Holography; ICA **82**, 116

Gene duplication; Serpin; Microarray; Sequence divergence; Expression divergence **82**, 226

Gene expression; Coregulation; Promoter modules; Genetic algorithm **82**, 235

Gene expression; Gene subset selection; Probabilistic model building genetic algorithm; Support vector machine; Classification of cancer data; Informative genes; Weighted fitness; *k*-Nearest neighbor classifier; Signal-to-noise ratio **82**, 208

Gene subset selection; Probabilistic model building genetic algorithm; Support vector machine; Classification of cancer data; Informative genes; Gene expression; Weighted fitness; *k*-Nearest neighbor classifier; Signal-to-noise ratio **82**, 208

Generative topographic mapping; Cluster analysis; Electromyography; Motor unit action potentials; Self-organizing map **82**, 273

Genetic algorithm; Gene expression; Coregulation; Promoter modules **82**, 235

Genetic code; Binding change mechanism; Bioenergetics; Origin of life; RNA World; Thermosynthesis **82**, 93

Genetically transposable elements; Thomas Gold; Deep hot biosphere; Macroevolution; Biodiversity; Neo-Darwinism; Geological catastrophism; Global mass extinctions; Bioplutons; Bioplutonism **82**, 83

Geological catastrophism; Thomas Gold; Deep hot biosphere; Macroevolution; Biodiversity; Neo-Darwinism; Global mass extinctions; Genetically transposable elements; Bioplutons; Bioplutonism **82**, 83

Global mass extinctions; Thomas Gold; Deep hot biosphere; Macroevolution; Biodiversity; Neo-Darwinism; Geological catastrophism; Genetically transposable elements; Bioplutons; Bioplutonism **82**, 83

Gompertz function; Anharmonic potential; Fractals; Complexity; Growth; Self-organization **82**, 61

Griniasty et al.; Vision; Object-recognition; Quantum; Gabor wavelets; Temporal sequences; Holography; ICA **82**, 116

Growth; Gompertz function; Anharmonic potential; Fractals; Complexity; Self-organization **82**, 61

High order gene–gene interaction; Epistasis; Petri net; Multi-start random hill climbing **82**, 74

Holography; Vision; Object-recognition; Quantum; Gabor wavelets; Griniasty et al.; Temporal sequences; ICA **82**, 116
