This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We met a 38-year-old female patient with lung cancer during pregnancy.
- The right lower lobectomy was performed via VATS at 24 weeks of gestation.
- The pathologic diagnosis was a large cell carcinoma with T2bN1M0.
- The patient is alive and doing well 10 months after lobectomy.
- Her baby is alive at 6 months of age without any evidence of malignancy.
