Acknowledgments: None

Financial Disclosures: None

Patient A

The patient is a 55-year-old man with a history of Crohn's disease requiring multiple small bowel resections and a history of uric acid stones. He developed bilateral staghorn calculi and has undergone numerous interventions including 3 left percutaneous nephrolithotomies (PCNL's), 2 right PCNL's, and multiple ureteroscopies with holmium laser lithotripsy (URS/HLL). His most recent procedure, performed at our institution, was a right PCNL in 2013.
