A highly selective and sensitive coumarin derived fluorescent probe for detecting Hg^{2+} in 100% aqueous solutions

Bing-jie Pang, Qi Li, Chao-rui Li, Zheng-yin Yang

PII: S0022-2313(18)31325-5
DOI: <https://doi.org/10.1016/j.jlumin.2018.09.042>
Reference: LUMIN15925

To appear in: *Journal of Luminescence*

Received date: 21 July 2018
Revised date: 18 September 2018
Accepted date: 19 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A highly selective and sensitive coumarin derived fluorescent probe for detecting Hg²⁺ in 100% aqueous solutions
