Particle engineering of needle shaped crystals by wet milling and temperature cycling: Optimisation for roller compaction

David Wilson, Matthew Bunker, David Milne, Anna Jawor-Baczynska, Keddon Powell, John Blyth, David Streather

PII: S0032-5910(18)30639-9
DOI: doi:[10.1016/j.powtec.2018.08.023](https://doi.org/10.1016/j.powtec.2018.08.023)
Reference: PTEC 13608
To appear in: *Powder Technology*
Received date: 11 April 2018
Revised date: 10 July 2018
Accepted date: 8 August 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Particle engineering of needle shaped crystals by wet milling and temperature cycling: optimisation for roller compaction

David Wilson^{1*}, Matthew Bunker², David Milne¹, Anna Jawor-Baczynska¹, Keddon Powell¹, John Blyth² and David Streater²
