This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Simulation Evaluation of Urban Low-carbon Competitiveness of Cities within Wuhan

City Circle in China

Highlights

1、 Detailed evaluation indicators which contribute to building low-carbon city were established.

2、 The simulation model of urban low-carbon competitiveness was built based on a dynamic system which was different from many studies for static evaluation.

3、 Problems were identified through comparing and forecasting the trajectories of urban low-carbon competitiveness within Wuhan city circle.
