Revised date: 13 June 2018

Please cite this article as: W. Zhou, et al., Hybrid tactics for bifurcation control in a fractional-order delayed predator–prey model, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.09.185>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- 1) Hybrid control strategy is devised to deal with the problem of bifurcation control.
- 2) The stability performance is extremely excellent with the proposed controller.
- 3) The impact of feedback gain on the bifurcation point is displayed for some given interval.
