This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- **The use of antidepressant medications and the potentially adverse effects of such medications may contribute to the increased cardiovascular disease risk.**
- **Adverse event reporting systems can be used to produce evidence with which to create effective policies for the safe use of drugs.**
- **The occurrence rate of cardiovascular adverse events and clinical symptoms varies and depends on the antidepressant used.**
- **Serious adverse events associated with antidepressants may have a significant impact on older patients.**
