This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlightsd

- A generalized form for the analysis-based sparsity reconstruction, which contains the total variation (TV) regularization.
- A novel method to accelerate the optimization for different structured sparsity patterns using the proposed preconditioning.
- An entirely new algorithm is proposed to solve the TV and joint TV based reconstruction, by the proposed preconditioner and incomplete LU decomposition
- Extensive comparisons with 14 state-of-the-art algorithms.
