

## Accepted Manuscript

Prediction of Partially Observed Human Activity based on Pre-trained Deep Representation

Dong-Gyu Lee, Seong-Whan Lee

PII: S0031-3203(18)30304-2  
DOI: <https://doi.org/10.1016/j.patcog.2018.08.006>  
Reference: PR 6635

To appear in: *Pattern Recognition*

Received date: 26 March 2018  
Revised date: 3 July 2018  
Accepted date: 11 August 2018

Please cite this article as: Dong-Gyu Lee, Seong-Whan Lee, Prediction of Partially Observed Human Activity based on Pre-trained Deep Representation, *Pattern Recognition* (2018), doi: <https://doi.org/10.1016/j.patcog.2018.08.006>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We propose a novel ongoing human activity descriptor for video class prediction
- The proposed method automatically captures the potentially important relationships.
- We utilize pre-trained CNN without additional network training for cost-efficiency.
