Subspace Clustering with the Multivariate-t Distribution

Angelina Pesevski, Brian C. Franczak, Paul D. McNicholas

PII: S0167-8655(18)30284-8
DOI: [10.1016/j.patrec.2018.07.003](https://doi.org/10.1016/j.patrec.2018.07.003)
Reference: PATREC 7229

To appear in: *Pattern Recognition Letters*

Received date: 23 June 2017
Revised date: 5 February 2018
Accepted date: 1 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A multivariate- t analogue of the HDDC family is introduced.
- Clustering is carried out in a lower-dimensional subspace.
- The multivariate- t extension allows for robust clustering.
- Parameter estimation is carried out via an ECM algorithm.
- Demonstrated for image recovery of Martian surface data.
