A novel homotopy-wavelet approach for solving stream function-vorticity formulation of Navier-Stokes equations

Qiang Yu, Hang Xu, Shijun Liao, Zhaochen Yang

PII: S1007-5704(18)30215-6
DOI: [10.1016/j.cnsns.2018.07.001](https://doi.org/10.1016/j.cnsns.2018.07.001)
Reference: CNSNS 4571

To appear in: *Communications in Nonlinear Science and Numerical Simulation*

Received date: 13 July 2017
Revised date: 2 June 2018
Accepted date: 1 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The novel approach Homotopy analysis wavelet technique is established.
- The excellent computing efficiency of the proposed technique is illustrated.
- The proposed approach is adapted to both homogenous and nonhomogeneous boundary conditions
- The incompatible boundary conditions are reconstructed by Coiflets
