This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper is concerned with the robust synchronization problem for a class of complex networks with persistently time-varying and state-dependent disturbances.
- A novel and generalized synchronization error function is proposed to unify the existing strong and weak synchronization error models.
- Adaptive pinning control and coupling adjustment strategies are constructed to ensure the bounded synchronization under the influence of persistent disturbances.
- An application of Lorenz system networks is given to verify the effectiveness of the proposed method.
