A sensor selection method using a performance metric for phased missions of aircraft fuel systems

J. Reeves , R. RemenYTE-PreScott , J. Andrews , Paul Thorley

PII: S0951-8320(17)31463-1
DOI: [10.1016/j.ress.2018.07.029](https://doi.org/10.1016/j.ress.2018.07.029)
Reference: RESS 6228

To appear in: *Reliability Engineering and System Safety*

Received date: 15 December 2017
Revised date: 16 July 2018
Accepted date: 26 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A sensor selection method for systems operating phased missions is proposed
- The proposed sensor performance metric evaluates sensor ability to detect and diagnose critical system failures
- The method is illustrated on the fuel system of Airbus A380-800
