Partial monitoring of multistate systems

Kristina Skutlaberg, Arne Bang Huseby, Bent Natvig

PII: S0951-8320(17)31057-8  
DOI: <https://doi.org/10.1016/j.ress.2018.08.006>  
Reference: RESS 6242

To appear in: *Reliability Engineering and System Safety*

Received date: 5 September 2017  
Revised date: 30 July 2018  
Accepted date: 11 August 2018

Please cite this article as: Kristina Skutlaberg, Arne Bang Huseby, Bent Natvig, Partial monitoring of multistate systems, *Reliability Engineering and System Safety* (2018), doi: <https://doi.org/10.1016/j.ress.2018.08.006>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Quantify the effect of partial monitoring of multistate components in a system.
- The quantification is done by calculating preposterior losses.
- Efficient simulations by using discrete event simulations.
- Framework for optimal monitoring planning balancing costs with information loss.
