Received date: 18 August 2017
Revised date: 14 May 2018

Please cite this article as: Quantitative analysis in nonlinear dynamic complexity detection of meditative heartbeats, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.08.124>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Static and dynamic symbolic nonlinear complexities are extracted from heartbeats.
- Shannon entropy for individual symbolization and joint entropy for two symbolic methods are employed.
- Meditative heartbeats have increased regularity and reduced nonlinear complexity.
- Meditation training, we suppose, improve self-control to cardiac regulation system.
