This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights and Graphical Abstract

A number of carbamodithioates derived either from SFE or from SFA possess better anti-proliferative activities than their parent compounds: SFE or SFA. More important, they are more stable than SFE or SFA in protic solvents.
