Structure and Biosynthesis of Benzoxazinoids: Plant Defence Metabolites with Potential as Antimicrobial Scaffolds

Wouter J.C. de Bruijn, Harry Gruppen, Jean-Paul Vincken

PII: S0031-9422(18)30337-6  
DOI: 10.1016/j.phytochem.2018.07.005  
Reference: PHYTO 11824  
To appear in: *Phytochemistry*  
Received Date: 30 January 2018  
Accepted Date: 16 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Graphical abstract

Monomeric natural benzoxazinones lack potency as antimicrobial compounds, chemical modification of the 1,4-benzoxazin-3-one scaffold can yield potent antimicrobial compounds.
