Investigation of Electromechanical Coupling Torsional Vibration and Stability in a High-Speed Permanent Magnet Synchronous Motor Driven System

Xing Chen , Hanbing Wei , Tao Deng , Zeyin He , Shuen Zhao

PII: S0307-904X(18)30346-9  
DOI: [10.1016/j.apm.2018.07.030](https://doi.org/10.1016/j.apm.2018.07.030)  
Reference: APM 12383

To appear in: *Applied Mathematical Modelling*

Received date: 26 August 2017  
Revised date: 6 July 2018  
Accepted date: 11 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Electromagnetic excitation was derived by using Maxwell theory.
- The electromechanical coupled mechanism was revealed based on the natural frequency modulation.
- The nonlinear torsional equation and mechanism were validated by experimental results
- Some analytical resonance characteristics were investigated and confirmed by numerical studies.
