Please cite this article as: Qiangqiang Wang , Bin Zhang , Analysis of a busy period queuing system with balking, renegeing and motivating, *Applied Mathematical Modelling* (2018), doi: <https://doi.org/10.1016/j.apm.2018.07.053>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

1. We develop a model for analyzing the multi-server busy period queuing system with balking, reneging and motivating.
2. The piecewise curves with threshold structure are introduced.
3. The effectiveness of the proposed model is shown with the empirical example.
