This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The dynamical model of the spacecraft with two groups of lateral solar arrays is established.
- Global modes of the model are obtained and used to discrete the PDEs of the system.
- Comparisons of the natural characteristics are performed with finite element model.
- Dynamic responses of attitude motion and flexible vibration are performed by simulation examples.
