This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Supercritical Water Gasification of Microalga *Chlorella vulgaris* over Supported Ru

Graphical Abstract

Ru particles on Ru/charcoal catalyst (HAADF image after catalyst heat treatment).

Highlights

- Supported Ru showed high activity for supercritical gasification of microalgae.
- Ru/charcoal gasified 87 % C of *C. vulgaris* at 385 °C and 26 MPa within 30 min.
- Its rate depended on Ru particle size, while support influenced on gas composition.
